

goodbye.

Where can I go from here?

Processing

C++

Python

Processing

Prototyping language
Java-like

Powerful (2D, 3D, packages...)

Not really used in the industry, but fun!

Used all over in the industry
powerful (more syntax constructs)
Faster if used right
No GC (avoids stuttering :))
Inspiration of Java

Python

Easy to learn

Very expressive

PyGame makes life easy

Slow :(

Game Engines

Many are designed for 3D
(some support 2D)
e.g. Unity

Some are designed for 2D
e.g. Adventure Game Studio

Excellent game design series: Extra Credits

<https://www.youtube.com/user/ExtraCreditz>

Free programs you might find useful:

2D - Paint .Net (or GIMP.....), Aseprite (pixel art)

3D - Blender (all purpose) (paid alternative - 3DS Max),
Sculptris (sculpting) (paid alternative - ZBrush | Mudbox)

Sound - Audacity

Game tools - Tiled

Examples of great game code

Quake

Homeworld

<https://github.com/id-Software/Quake>

<https://github.com/aheadley/homeworld>

Final tips

Don't be afraid to explore!

Don't stick to only one area.

Game development is about having many skills.

Mod!!!

Have fun ^.^
